

GoldenRatio Token

Whitepaper April 2020

Abstract.

GoldenRatioToken (GRT) project is an experiment which has no funding to prove the importance of a quality community in a crypto related project. Our goal is to create value into the project which will flow back into the crypto community benefiting other projects. Therefore our supply will be distributed among active people contributing to the global crypto community.

The experiment is also aimed to be established as a viable project within 90 days. We aim to achieve this by creating several mechanisms and use cases

Usecase goals:

Supporting the global crypto community through the experiment by creating value on the GoldenRatioToken, which will mean a flow in liquidity for other projects from our project.

Gambling

Dapps , several gambling related smartcontracts, ran over dapps in a wallet/metamask.
Integration of GRT to casino platform from blockmatrix.com

Marketing Bulk tools for data appending and data processing/cleaning/sorting/formatting

Any other suggested / community collaborations ending up in not described usecases.

Tokenomics

Low Supply of 16180 tokens total

Supply been dropped to 175+ people related to crypto projects

25% to first 25 people at 1%

25% to 50 people at 0.5%

25% to 100 people at 0.25%

15% reserved for networking/exchanges/rewards (max 1% per)

10% to 1618 people at 1 GRT each

Voluntary Timelocking option through SovCube

Multiple Use Cases
